bch-ipfs-scrape

Scrape BCH blockchain for
IPFS urls and CIDs

<https://github.com/9500/bch-ipfs-scrape>

The story of CashToken metadata

A lot of CashTokens use IPFS to store metadata (BCMR registry and image data)

I don't want BCH CashToken metadata to disappear from the IPFS network

So I made a tool to help me self-host it all

-_(ツ)_/-

What is bch-ipfs-scrape

- CLI tool
- For IPFS node runners
- Requires Chaingraph and Fulcrum APIs
- For mirroring BCH IPFS data
 - Cashtoken BCMR registries
 - FT icons
 - NFT images

What does bch-ipfs-scrape do?

- Queries BCH blockchain for valid BCMR registries
- Exports IPFS CIDs and URLs for BCMR json files
- Fetches BCMR jsons from IPFS/HTTPS and stores them locally
- Exports CIDs of IPFS links contained inside BCMR jsons (NFTs)

The Vision

- To self-host all CashToken metadata indefinitely on IPFS network
- Allow anyone to do the same easily
- To publish scraped IPFS CIDs periodically to make it even easier

THANK YOU!
